

TECHNICAL ADVISORY BULLETIN

Re: Sodium Nitrites
Date: 28 April 2010

In response to recent inquiries expressing concerns regarding the use of sodium nitrite as a rust inhibitor, Berenfield Containers has determined that no nitrite based interior linings, rust inhibitors, or other interior coatings are used in the manufacture of steel drums at any Berenfield facility.

It has also been determined that nitrites are not present in the solution used to wash and/or rinse drum components.

James R. Ogden
